

## Week 2.

- The session was there at glassroom and I totally forget asked the CR and finally I arrived on time, ~~I~~ I have been done for, if I ~~would~~ would not arrived on time.

The session started by Anubha Ma'am. seeing the journals that we have made or not I been following the same english journal (a big spiral notebook) from 1st sem which was totally not acceptable by ma'am hence now I have to make a new one.

Now ma'am started with the homework she gave last time ("Wow moment of your past two and half years") my classmates ~~to~~ introduced themselves and told about the wow moment, didn't got the chance ~~but~~ to spoke about mine, but listened to my friends. It was really fun and interesting what story they have.

At the last we all played a game in which a member from the team would be blindfolded and the team members would have to give commands to him till he reaches to the target (the bag) after walking through the path of obstacle.

filled with  
Catch was there should be no straight forward words like "go straight" it should be coded like "xoxo".

Our team finished ~~the~~ was the one who finished the game really fast, it only took around one and half minutes for us to finish.

Q How we came up with code words?  
What was our strategy?  
What was different in our team than the other?  
What better we could have done?

Any First our team was discussing about different ways we can have code words at the end we decided to stick with one of our team mates idea as the time was ticking and had really less time to prepare.

We went with the names of vegetables as our code words, gave different vegetables their direction and with a twist add team mates names for direction too.

- Our strategy was simple just stick with what we have decided as fast as possible and to revise it again on again so that we make ourself familiar to it. This revision strategy made us ~~a~~ different from other team-mates, as they would have spend the most time in thinking about code words but we did opposite to what they did.
- Our finish time was around one and half minutes which was faster than all other teams.

• What better we 'would have done would be making code words that actually somewhat matches with the directions.
